Kemiko's Rembrandt Polymer Stains

'Kemiko Ushers in Vivid Rembrandt Polymer Stains'

Kemiko introduces *Rembrandt Polymer Stains*, a vibrant new addition to the Kemiko Product line. *Rembrandt* is an easy-to-use, eco-friendly polymer that offers a different decorative statement from the natural look of Kemiko Stone Tone Acid Stains.

Rembrandt presents a vivid and energetic palette of colors that differ from the earthy tones of Kemiko Acid Stains. Colors ranging from cobalt blue, reds, oranges, warm terracotta, as well as black and white are a distinctive alternative to the subtle effects of Kemiko Stains.

Easy to use *Rembrandt* polymers dry to the touch in about an hour, and 2 or more pigments can be mixed to achieve your perfect color. After drying, more color can be applied over the base color, if desired, as a faux effect. Sponge, marbleize, or rag it..... your imagination is the only limit with *Rembrandt Polymer Stains!*

Rembrandt boasts eco-friendly and ultra-low VOC content (volatile organic compound) that complies with the stringent California South Coast Air Quality Management District rules for VOC content for architectural coatings.

Where color excitement in concrete is needed, *Rembrandt Polymer Stains* are the perfect choice! Residential, commercial, or institutional interiors and exteriors will all benefit from the versatility of these wonderfully bright and colorful stains.
